The manual is automatically downloaded on the desktop or in the file downloads of your computer. The same way is also possible if you prefer to search by choosing the menu Brands. To view the documents, you must have Adobe Reader installed on your computer. To download free the most recent version of this software click here. Even exchange tracks, waypoints, routes and geocaches wirelessly between similar units. When the going gets tough, Colorado leads the way. Just take your pick from our preprogrammed SD cards, including street maps, topographic maps, coastal charts or inland lake data. The card slot is located inside the water resistant battery compartment, so you don't have to worry about getting it wet. Now you can send your favorite hike to your buddy to enjoy or the location of a cache to find. Sharing data is easy. Just select "send" to transfer your information to other Colorado units. Customize Colorado's interface based on your favorite activity. Even show off photos of your excursions with its picture viewer. Slim, lightweight and water resistant, Colorado is the perfect companion for all of your outdoor pursuits. The advantage is clear — whether you're in deep woods or just near tall buildings and trees, you can count on Colorado to help you find your way when you need it most. You even can use the altimeter to plot barometric pressure over time, which can help you keep an eye on changing weather conditions. Getting started is easy, so get out there, explore, and share. Plus, you just can't see anything from it in broad day light. The screen is dark compared to some other units we've owned and tested in the field. And just so you all know, if you ever clip the thumb wheel out of its socket and you get any grit, sand, water or anything else in there, your GPS is toast!! We've seen it twice already. The poorly design allows you to pop the thumb wheel way too easy if you own one, try it and you'll see, allowing anything contaminants to enter the GPS and turning it into a very cool expensive door stopper or a rear view mirror blingbling. If you want the best of the best from

Garmin, for outdoor use, in any terrain and weather, with the best features and military worthy, go with the GPSMAP 60Cx or 60CSx. You wont be disappointed. Pros looks cool and thats it. Cons thumbwheel falls off, dark screen, battery burner Recommend. NO 67 viewers found this helpful. <http://gebzececik.com/userfiles/canon-super-g3-manual-faxphone-l80.xml>

Was this review helpful to you Finding my tree stand in the dark is a breeze. YES 50 viewers found this helpful. Was this review helpful to you I have found the GPS V receiver to be fast and accurate. The GPS V usually displays its position much closer or on the road compared to the Oregon. It is also odd that the Oregon will frequently indicate speed, while the GPS is actually stationary. This diminishes the users confidence regarding the results of actual speed and time calculations. To date I have never seen WAAS work on the Oregon, while it usually becomes active after 12 minutes with the GPS V in the same situation. However, enabling WAAS really slows down the GPS V map refresh and route calculations. Obviously I havent seen WAAS working on the Oregon to know what impact the feature may have on overall device performance. Apparently the Oregon receiver has far more channels 20 than the GPS V 12, so potentially, enabling WAAS on the Oregon may have minimal impact on other GPS functions. Another issue with the Oregon appears to be elevation accuracy. I have the Oregon set to calibrate the barometer at power up, but it would be nice to just use the GPS signal to calculate elevation, as this method has proved very accurate with the GPS V. In many respects the Oregon touch screen is a step backwards. Plus, now there are more finger prints all over the screen, and more attention has been required to perform the sequence on the Oregon, which is distracting while driving. Having said all that, the Oregon calculates routes very quickly. A route that takes 2 minutes to calculate on the GPS V, takes no more than several seconds Pros small, fast, feature rich Cons gps accuracy, no hard buttons Recommend. YES 74 viewers found this helpful. Was this review helpful to you It worked well. No glitches so far. Still need to play with it to figure out all the options. Pros geocaching incorporated Cons battery life Recommend.

YES 71 viewers found this helpful. Was this review helpful to you It has all of the features that we use while out on the trails. The screen is dimmer than the 60CSx, but has a much higher level of detail. Weve found that the screen is very good in bright light, but needs to be brightened when in the car between caches. The loading of GPX files from GSAK works very well, and all of the geocaching logs and hints are moved over. Weve found this completely eliminates our need to take paper with us out on the trails. The roller wheel allows for one hand use, and with a little customization of the menus, everything is within a few clicks of the button. We would prefer to have had a lanyard instead of the carbiner. Were very happy with the unit. Well see if get the same live out of this one as our 10 year old Garmin Legend. Recommend YES 87 viewers found this helpful. Was this review helpful to you This included using waypoints, routes, maps, and finding destinations. I even easily found my first geocache today that I downloaded from geocaching.com. I should warn you to register immediately since that automatically upgrades your software and fixes bugs. Pros intuitive Cons spelling things with the wheel it is not precise Recommend. YES 70 viewers found this helpful. Was this review helpful to you After about week my Garmin stopped working totally. Now I wait from Garmin support center RMA number to be able to send it to repairing. In Europe Garmin daughter companies do not tough devices bought from USA so I have to sent it to USA or Canada. Earlier I had 76CSplus. It was several years old, but there were some points where it was better waypoint averaging, you could more broadly tailormade screens etc. However in the one week that my Colorado worked, it was OK for my purpose Geocaching and boating. Pros geocaching, fast screens Cons garmin quality control, if that exists Recommend. YES 83 viewers found this helpful.

Was this review helpful to you I love the ease of navigation from one setting to the next. Very user friendly. I can not figure out how to manually type in coordinates but there has to be a way. Also, it

does not allow to erase a single way point without erasing all waypoints. The dark screen comment is actually a plus in sunlight and is easy to convert to a backlit screen. Rugged, very pleased. Need to figure out a few things since it is still a bit new. Pros ease of use, options, graphics, topo addon, style Cons must change settings for different types batteries Recommend. YES 96 viewers found this helpful. Was this review helpful to you I like to Colorados form factor, large screen, and the ability to really fine tune the backlight yes, a quirky thing but important to me. As a semiavid geocacher I really like the caching functions on the Colorado direct import of GPX files, etc.. The major issue for me is getting used to the totally different user interface. The blackberry inspired thumbwheel takes some getting used to but now that I have figured out where things are its making more sense. Pros highly water resistant, good screen Cons getting used to the thumbwheel Recommend. YES 87 viewers found this helpful. Was this review helpful to you. Just take your pick from Garmins preprogrammed SD cards including street maps, topographic maps, coastal charts or inland lake data. The card slot is located inside the waterproof battery compartment, so you don't have to worry about getting it wet. This allows not only the name and coordinates, but the description and hint to be downloaded as well. If you are into Geocaching, this is worth its weight in gold. Patterson, California. It shares some of the problems of the Oregon range, but it has a better screen as well as an unusual control scheme. The device has a twotone grey and black case that is mainly made of plastic and rubber.

<http://dana1157.com/images/bt-home-hub-1-user-manual.pdf>

Garmin says the case is built to IPX7 standards to make it waterproof, but it isn't as weather resistant as we would have hoped. The rubber backing doesn't form the tightest seal with the surrounding plastic, allowing fine sand granules to enter the casing around the SD card slot during testing. We were critical of the placement of the microSD card slot on the Oregon 300, but we actually prefer the extra protection that it provides over the relatively unprotected card slot of the Colorado 300. The Colorado 300 has two quick access buttons and a multifunctional rotary dial; an unorthodox system but one that has its merits. The rotary dial is tied to the unit's configurable shortcuts menu. Because the Colorado 300 lacks the touch screen of its Oregon range counterparts, it also lacks the misty protective layer on its display. As a result, the Colorado's display is of a much higher quality and can be easily viewed in direct sunlight. Pressing and holding a direction on the pad shifts the display's focus away from the user's current position, enabling you to view different portions of the map. Like the Oregon 300, the Colorado 300 uses a worldwide base map with Digital Elevation Model DEM relief mapping for basic topographical information. The unit also provides a 3D view for more conventional automotive GPS navigation, though this function is useless without the optional street maps. Configurable profiles have largely been a gimmick in other handheld GPS devices, allowing only insignificant changes between profiles. The Colorado 300, however, implements the best use of configurable profiles we've seen, essentially altering the unit's functions according to which profile is chosen. Choose the recreational profile and the unit has a shortcut contextual menu that allows quick access from the rotary dial. The automotive profile, on the other hand, treats the right quick access button as a page button, adds a 3D view and has an interface similar to automotive GPS devices.

Like the Oregon models, the Colorado 300 allows for wireless sharing between devices. Garmin doesn't specify which wireless protocol is used, but the device will automatically search out compatible models currently limited to the Colorado 300 and Oregon 300 and 400 and allow users to share waypoints, tracks, routes and geocaches. The process is painless, and the function will be useful in situations involving a group of trekkers with more than one GPS device. Its a great device and I like it very much, but there is one important feature missing Waypoint proximity. There are thousands of paragliding pilots who will appreciate if this feature will be added in the next software releases. We appreciate. The highlights of this unit are The rubberised back and sides are comfortable to hold and you feel like you Everything happens on the touchscreen. While you can see the maps The Oregon 550 has a more or less glossy screen, but A small piece of grit that caught under my A screen protector solves this problem. The 550 has the 3axis til compensating compass The next section describes the Lifting the catch lets you The Oregon uses a microSD data card which goes in a slot The carabiner mount, supplied with the unit, There is also an attachment for lanyard. There The Garmin manual says up to 16 hrs. How much you use the backlight, redraw the Colorado firmware updates have included battery life If you're using NiMH batteries, you should take The power cable for the Colorado car kit does not fit the Oregon.

The rail mount of the Oregon and Colorado Unscientific tests under Other have reported the Oregon receiver isn't as good, The time to fix was similar to the other units. All other functions are controlled by the touchscreen. The screen The camera has autofocus and There are lower resolution settings, but with the storage available on the device and The camera lens is There's no flash. Lowlight photos show noise, as you'd expect with a camera with a small lens and Such photos are said to be geotagged. The raster maps and imagery that you can upload are limited to a fairly small areas and lack the Find index that the GPS product provides. These icons provide access to the maps, searching, tracks Tapping the signal strength icon opens the satellite signal screen. The GPS also has The map view is very easy to There is also a bar at the top that shows the In the image, above, the So you can see the info about features by On the Colorado or 60CSx, you would do the same thing by moving the At the bottom of the detail screen there are buttons to save the point as a waypoint The displays are clear and will be familiar The list of results There is no equivalent to the 60CSx Find by Name function. This is so much easier to use than the buttons There is a worldwide map that includes reliefshaded terrain that is quite You can control whether individual tracklogs are displayed on the map This is the same level of control as you get with the 60CSx. You can load geocaching.com You can mark caches as found Our Colorado review covers the Colorado features in The Garmin Trip and Waypoint Manager software If you have a big track log Spanner does not work with Windows Vista. The track log holds 10,000 points. When this limit Even better, On the other Garmin handhelds, you lose the timestamps when you save a track and the The Oregon preserves both the timestamps and all the track points. The matt surface of the 300 screen means its not as easy to see as the The 550 screen is more glossy and an improvement on the 300.

We've found Though BaseCamp and RoadTrip are free downloads. It is very fast and allows you to locate places anywhere in the Its used to find nearby huts or gas If you want to view the map away from the current They're not all collected together This is a step backwards from the Colorado which did have some settings in the map view. The touchscreen interface is very easy to use. While the 60CSx still has some If you create a lot of waypoints or do a lot of searches, the onscreen keyboard Also the smoothly rounded case with no external antenna make the unit All Rights Reserved.
